**SLOT: L51+L52**

**FACULTY: Dr. ARCHANA TAMIZHARASAN**

**DATE: 10-11-2022**

## **INTRODUCTION:**

The "Dental Clinic Management System" has been developed to override the problems prevailing in the practicing manual system. This software is supported to eliminate and, in some cases, reduce the hardships faced by this existing system. Moreover, this system is designed for the particular need of the company to carry out operations in a smooth and effective manner. The programme is kept as simple as possible to reduce data entry errors. Additionally, it displays an error notice when you enter invalid data. The user doesn't require any formal training to use this system. This alone demonstrates how user-friendly it is. The management of doctor, dental clinic, test, booking, and appointment information is a challenge for every firm, regardless of size. We provide unique personnel management systems that are tailored to your managerial demands because every dental clinic management system has different dental clinic needs. This is intended to aid with strategic planning and will help you make sure that your company has the appropriate amount of knowledge and information for your future objectives. Additionally, our systems provide remote access features that will let us manage the workforce whenever, wherever needed. This is great for executives who are constantly on the go and are busy. In the end, these solutions will enable you to manage resources more effectively.

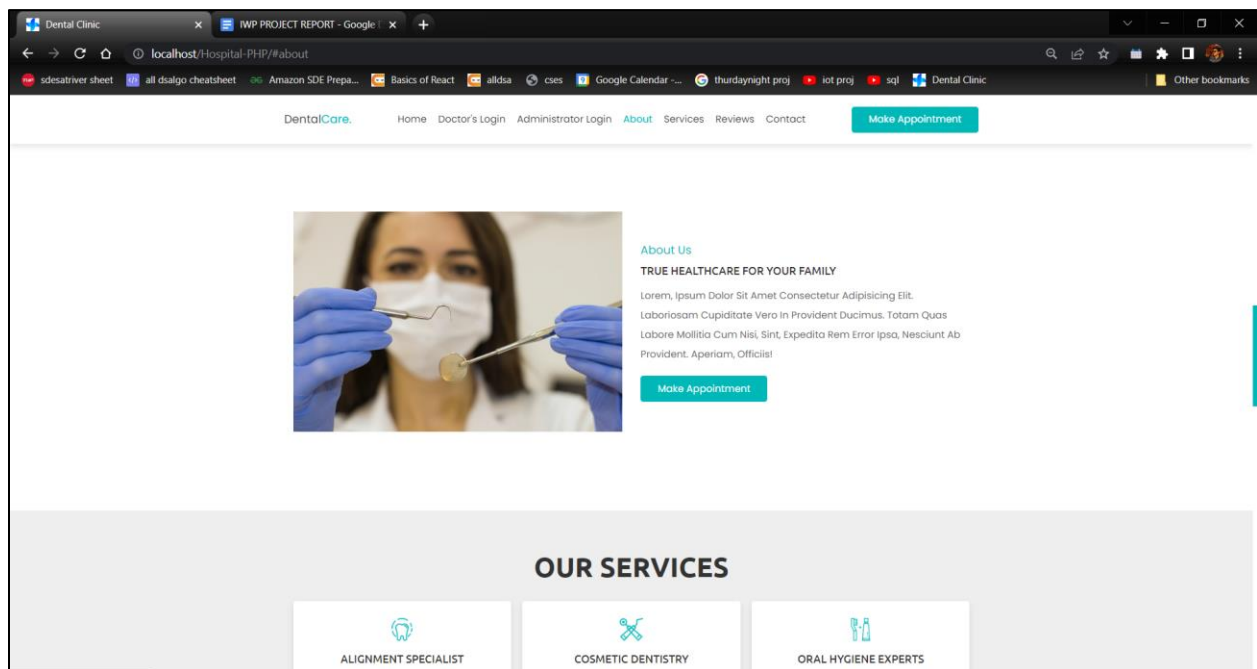

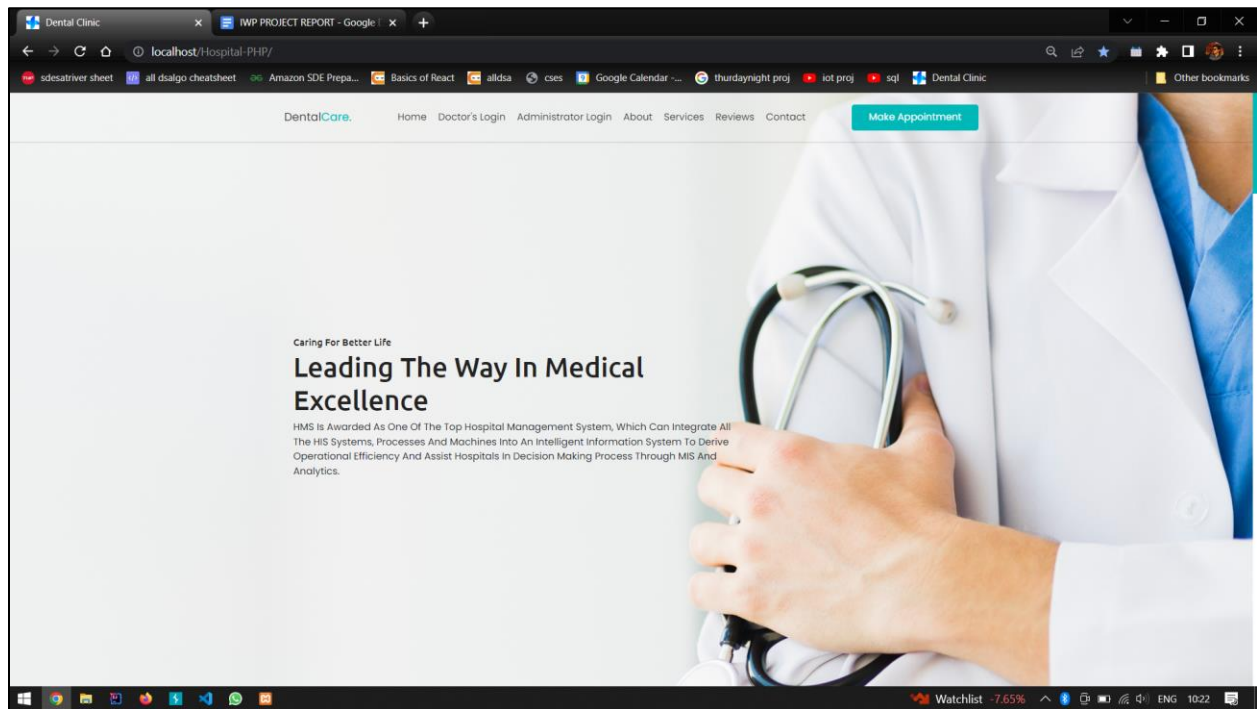

## **SOFTWARE REQUIREMENTS:**

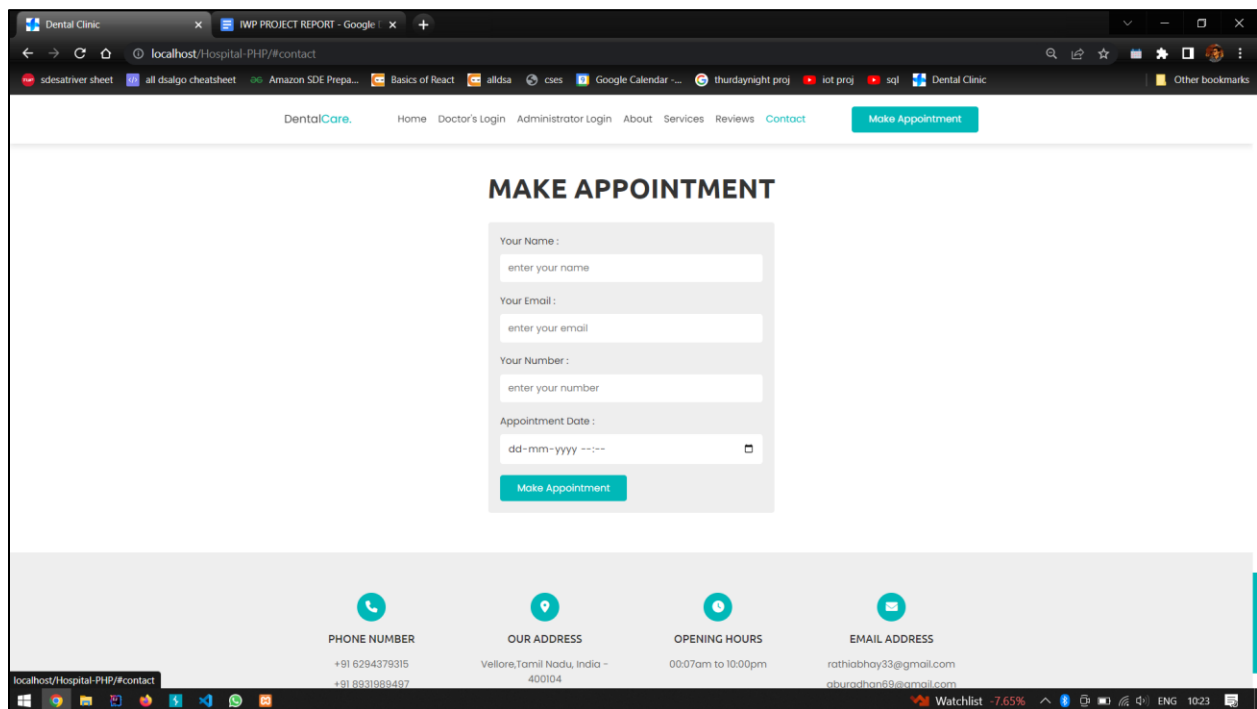

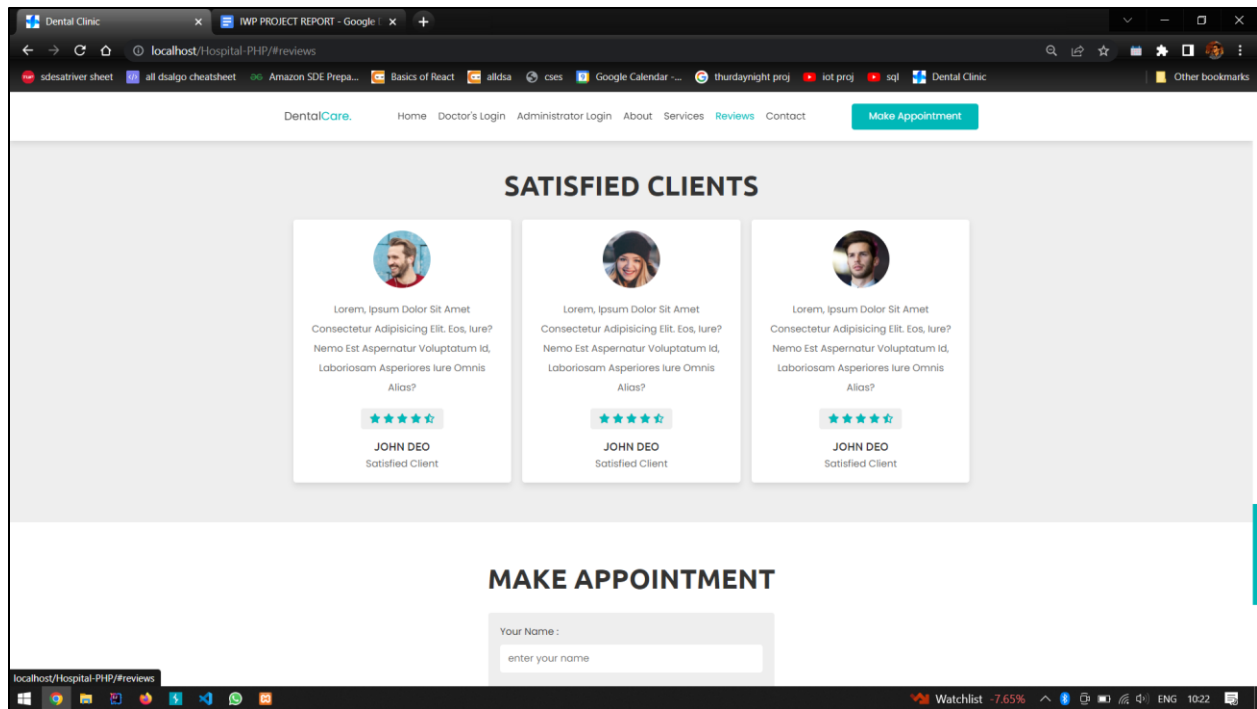

As soon as the analytical process is finished, the software requirements specification is produced. By providing a thorough description of the information, a thorough description of the function and behavior, an indication of performance requirements and design constraints, appropriate validation criteria, and other data pertinent to the requirement, the function and performance assigned to the software as part of system engineering are refined. The suggested system must meet the following standards:

- Information concerning the dental clinic's new entry must be stored in the system.
- The technology is designed to make it easier for internal staff members to locate and track down doctors through various consultations.
- Quantity records must be maintained by the system.
- The patient's record must be kept current by the system.
- The record must be updated and removed by the system.
- Additionally, the system needs a lookup field.
- To protect data, the system will also require a security mechanism.

Account Name : Individual Retirement Account

Account Amount : \$ 25000

Account Description

IRA's are simply an account where you stash your money for retirement. The concept is pretty simple, your account balance is not taxed UNTIL you withdraw, at which point you pay the taxes there. This allows you to grow your account with interest without taxes taking away from the balances. The net result is you earn more money.

## ER DIAGRAM:

## MODULES:

We have used PHP and MYSQL and Bootstrap to create a Dental Clinic Management website. Using javascript, html, and CSS, we have created the layout. And NPM packages is used for all other components. Connect-flash, Cookie-parser, Dotenv, EJS, Express, Express-EJS-Layouts, Express-File Upload, Express-Session, MongoDB, and Mongoose are a few of them. For the backend, PHP and MySQL are used.

## **CODING:**

Index.php

```
<?php

$conn = mysqli_connect('localhost','root','','contact_db') or die('connection failed');

if(isset($_POST['submit'])){

    $name = mysqli_real_escape_string($conn, $_POST['name']);
    $email = mysqli_real_escape_string($conn, $_POST['email']);
    $number = $_POST['number'];
    $date = $_POST['date'];

    $insert = mysqli_query($conn, "INSERT INTO `contact_form`(name, email, number, date)
VALUES('$name','$email','$number','$date')") or die('query failed');

    if($insert){
        $message[] = 'appointment made successfully!';
    }else{
        $message[] = 'appointment failed';
    }
}

?>
